SPRING KIT

Spring kit for full-size KTM SX & SX-F models and Husqvarna TC & FC models replacing the original WP AER cartridge. Spring preload is adjustable from the outside with indexing. Our Spring Kit is fitted with a thrust needle roller bearing to reduce spring friction for better handling.

Assembly

1. Replace the original WP AER cartridge with the Donerre Spring kit cartridge
2. Put 400ml of Donerre oil
3. Put the spring wedge with the thrust needle roller bearing then the spring
4. Screw the cap on the shaft
5. Tighten the locknut
6. Screw the cap on the fork stem

Application

- KTM SX (fullsize) and SX-F models
- Husqvarna TC (fullsize) and FC models

Adjustments

- + more preload on the spring
- less preload on the spring
